Use for	<ul style="list-style-type: none"><li>Examination of non-sterile products</li><li>Test for specified micro-organisms</li><li>Test for Bile Tolerant Gram-negative bacteria</li></ul> <p><b>Application:</b> Typically, 10 g of product are diluted in 90 mL Tryptic Soy Broth (TSB, e.g., art.-No. 501.B090), mixed and incubated at 20-25 °C for 2-5 h. The amount corresponding to 1 g of product is transferred to Mossel Broth and incubated at 30-35 °C for 24-48 h. An aliquot is subcultured on <b>VRBD Agar</b> and incubated at 30-35 °C for 18-24 h. Growth of colonies indicate the presence of Bile Tolerant Gram-Negative Bacteria.</p>

	* According to EP 2.6.13 USP<62>, no quantitative test (determination of recovery rate against a non-selective reference) is required – only the qualitative comparison with a previous approved batch is requested. However, during quality control at PMM recovery rate data are determined in reference to a previously released batch of the product.
